

PROTECTING THE HUMAN AND THE HIVE

Smart, science-backed solutions that help reduce dangerous bee-to-human interactions without harming hives or relying on excessive pesticides.

We believe you shouldn't have to choose between safety and sustainability. Our biology-based products work by interrupting the natural behavior patterns bees use to locate water, food, and new hive locations so they never become a problem in the first place. No hives destroyed. No people stung. No overuse of chemicals.

**WE HELP YOU PROTECT YOUR SPACES, YOUR CUSTOMERS,
AND THE BEES ALL AT THE SAME TIME.**

Each product plays a unique role in disrupting bee behavior safely and effectively:

BuzzBox™

FORAGING BEE SUPPRESSION

The Aculeo BuzzBox™ system stops foraging bees by interrupting the communication mechanism that honey bees use to signal sugar-rich food sources to the rest of the colony. This means a 90% reduction in nuisance bees at restaurants, drink stands, patios & event spaces. All without harming the colony.

Requires a carbohydrate-rich food source, which is readily available, but not included or supplied by Aculeo.

BuzzHero™

WATER SOURCE DETERRENT

BuzzHero™ is Aculeo's botanical spray that deters bees and wasps from pools, spas, and water features. Safe for people, pets, and pollinators, it uses natural scents to protect outdoor spaces without harm.

ScoutStop™

INFESTATION PREVENTION

Before a bee colony chooses a new location, scout bees survey the area. This trap intercepts them before they can report back, preventing swarm relocation and hive establishment on your property.

Requires two 5.3" x 8" glue boards, which are readily available, but not included or supplied by Aculeo.

BuzzBeacon™

PRECISION PHEROMONES

BuzzBeacon™ is the industry's most effective pheromone lure, powering BuzzBox™ and ScoutStop™. Its unparalleled formulation draws in nuisance foragers (BuzzBox™) and scout bees (ScoutStop™), allowing the devices to keep outdoor spaces clear and prevent new infestations without traditional harsh pesticides.

WHY IT MATTERS

According to the CDC, an average of 72 Americans die each year from bee, wasp, or hornet stings. In fact, aside from deer-related traffic accidents, these insects are the most deadly group of non-human animals in the U.S.

But the solution isn't eradication, it's prevention. The best way to reduce sting risk is to eliminate unnecessary contact between bees and people. Aculeo products do exactly that.

REAL RESULTS

"Our bee problems are almost non-existent. We went from fielding complaints and solving problems to having no customer complaints for over a year. [Aculeo has provided us] an out-of-sight, out-of-mind service for a problem that used to be an almost every day thing for us."
